

Assignment for Java Programming Course(part4)

Tutor: Yulong Deng, Apr, 2026. College of Computer Science, NJUPT

Exercise. Tell a story using codes

Magic House

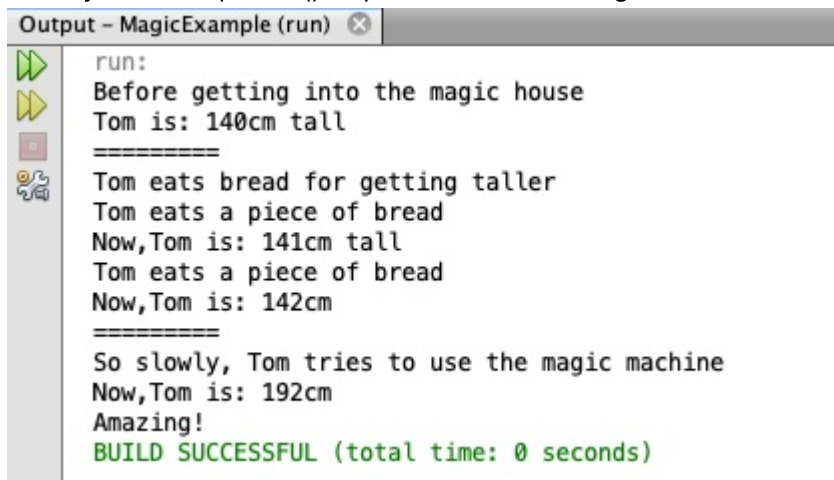

Tom is a short man who is only 140 cm tall and he is eager to get taller. One day, he is walking down the street and see a building with a poster on the wall " Magic House, Get Taller Quickly!!!". "Great!" Tom rushes into the house.

Exercise 1. Tom finds a kind of bread there, which will make him grow by just 1 cm after eating a piece of it. Try to write codes for the story. Here you should create three objects: the magic house, the bread and Tom.

Exercise 2. It seems like it's impossible to get taller quickly only by eating bread 8(. , luckily, Tom finds a weird machine in the basement. There is a a small door on the machine with a sign 'Warning: Get 50cm at a time, No turning back', He creeps into the magic machine... Several minutes passed, Tom finds to his surprised that he becomes a tall man. Now, he is over 190 cm tall! Try to write codes for the story. Here you should create a new object : the magic machine.

HINTS:

1. Tell story using codes means that you should creat objects and manipulate them and print out messages on the different phases of the story.
2. Think about how to design the program using what you have learned and make designs on classes and their relationship.
3. Creat only one project folder for both exercise 1 and 2, and write four source files for the four classes, each class one file. The magic house should be defined as the public class with the main method.
4. Use System.out.println() to print out the messages. Here is a sample.

```
Output - MagicExample (run)
run:
Before getting into the magic house
Tom is: 140cm tall
=====
Tom eats bread for getting taller
Tom eats a piece of bread
Now,Tom is: 141cm tall
Tom eats a piece of bread
Now,Tom is: 142cm
=====
So slowly, Tom tries to use the magic machine
Now,Tom is: 192cm
Amazing!
BUILD SUCCESSFUL (total time: 0 seconds)
```

How to submit your work to me for grading.

Notice: Netbeans is the IDE used for this course for lectures and experiments, but you are allowed to use other IDEs as your favorite tool to finish the assignment.

1. Finish the assignment in your IDE.
 2. Take a snapshot of your screen with the source code and output result in your IDE.
 3. Create a document using Microsoft Word or other Editors. Inside the document, please include your student number, name and the screen capture.
 4. Save the document as a word or pdf file and name it as studentid_assignment4.doc or studentid_assignment4.pdf.
 5. Send me an email attaching the document file. My email box for receiving assignments is **YULONGDENG@QQ.COM**
 6. The due date for the assignment is **May.8, 2026**.
-

Here is the sample of the document for your reference.

file name: F24040101_assignment4.doc or F24040101_assignment4.pdf

in the file, please include contents below :

Assignment 4

Student Number: F24040101

Student Name: XXXXXXXX
